

DRAFT
Water Shortage Response Plan
Town of Mocksville, North Carolina
May 2018

The procedures herein are written to reduce potable water demand and supplement existing drinking water supplies whenever existing water supply sources are inadequate to meet current demands for potable water.

I. Authorization

The Mocksville Town Manager shall enact the following water shortage response provisions whenever the trigger conditions outlined in Section IV are met. In his absence, the Town Mayor or his assignee will assume this role.

Mayor William J. Marklin, III
 Phone: 336.753.6700

Marcus Abernethy, Town Manager
 Phone: 336.753.6700
 Email: mabernethy@mocksvillenc.gov

II. Notification

The following notification methods will be used to inform water system employees and customers of a water shortage declaration: employee e-mail announcements, PSA announcements on local radio and cable TV stations, notices at municipal buildings, notices in water bills and on the Town’s website.

III. Levels of Response

Five levels of water shortage response are outlined in the table below. The five levels of water shortage response are: voluntary reductions, mandatory reductions I and II, emergency reductions and water rationing. A detailed description of each response level and corresponding water reduction measures follow below.

Stage	Response	Description
1	Voluntary Reductions	Water users are encouraged to reduce their water use and improve water use efficiency; however, no penalties apply for noncompliance. Water supply conditions indicate a potential for shortage.
2	Mandatory Reductions I	Water users must abide by required water use reduction and efficiency measures; penalties apply for noncompliance. Water supply conditions are significantly lower than the seasonal norm and water shortage conditions are expected to persist.
3	Mandatory Reductions II	Same as in Stage 2
4	Emergency Reductions	Water supply conditions are substantially diminished and pose an imminent threat to human health or environmental integrity.
5	Water Rationing	Water supply conditions are substantially diminished and remaining supplies must be allocated to preserve human health and environmental integrity.

In Stage 1, Voluntary Reductions, all water users will be asked to reduce their normal water use by 5%. Customer education and outreach programs will encourage water conservation and efficiency measures including: irrigating landscapes a maximum of one inch per week; preventing water waste, runoff and watering impervious surfaces; watering plants deeply to encourage root growth; washing only full loads

in clothes and dishwashers; using spring-loaded nozzles on garden hoses; and identifying and repairing all water leaks.

In Stage 2, Mandatory Reductions I, all customers are expected to reduce their water use by 10% in comparison to their previous month's water bill. In addition to continuing to encourage all voluntary reduction actions, the following restrictions apply: irrigation is limited to a half inch per week between 8PM and 8AM; outdoor use of drinking water for washing impervious surfaces is prohibited; and all testing and training purposes requiring drinking water (e.g. fire protection) will be limited.

In Stage 3, Mandatory Reductions II, customers must continue actions from all previous stages and further reduce water use by 20% compared to their previous month's water bill. All non-essential uses of drinking water are banned, and garden and landscape irrigation must be reduced to the minimum amount necessary for survival. Additionally, in Stage 3, a drought surcharge of 1.5 times the normal water rate may apply as directed by Mocksville Town Board.

In Stage 4, Emergency Reductions, customers must continue all actions from previous stages and further reduce their water use by 25% compared to their previous month's water bill. A ban on all use of drinking water except to protect public health and safety is implemented and drought surcharges increase to 2 times the normal water rate may apply as directed by Mocksville Town Board.

The goal of Stage 5, Water Rationing, is to provide drinking water to protect public health (e.g. residences, residential health care facilities and correctional facilities). In Stage 5, all customers are only permitted to use water at the minimum required for public health protection. Firefighting is the only allowable outdoor water use and pickup locations for distributing potable water will be announced according to Mocksville's Emergency Response Plan. Drought surcharges increase to 5 times the normal water rate may apply as directed by Mocksville Town Board.

IV. Triggers

The Town of Mocksville's primary water source is Hunting Creek, the following streamflow measurements, intake levels and production capacities trigger entry into corresponding water restriction stages.

Stage	River Operating Conditions
1	Water demand exceeds 25% of flow accessible to intake for 7 consecutive days.
2	Water demand exceeds 50% of flow accessible to intake for 3 consecutive days.
3	Water demand exceeds 50% of flow accessible to intake for 7 consecutive days.
4	Water demand exceeds 75% of flow accessible to intake for 3 consecutive days.
5	Water demand exceeds 75% of flow accessible to intake for 7 consecutive days.

V. Enforcement

The provisions of the Water Shortage Response Plan will be enforced by Town of Mocksville. Violators may be reported to the Town. Citations are assessed according to the following schedule depending on the number of prior violations and current level of water shortage.

Water Shortage Level	First Violation	Second Violation	Third Violation
Voluntary Reductions (Stage 1)	N/A	N/A	N/A
Mandatory Reductions (Stages 2 and 3)	Warning	\$250	Discontinuation of Service
Emergency Reductions (Stage 4)	\$250	Discontinuation of Service	Discontinuation of Service
Water Rationing (Stage 5)	\$500	Discontinuation of Service	Discontinuation of Service

Drought surcharge rates are effective in Stages 3, 4 and 5.

VI. Public Comment

Customers will have multiple opportunities to comment on the provisions of the Water Shortage Response Plan. First, a draft plan will be available on the Town of Mocksville website for customers to review. A notice will be printed in customer water bills notifying them of such. All subsequent revisions to the draft plan will be published at least 30 days prior to an adoption vote by Mocksville's Town Board.

VII. Variance Protocols

Applications for water use variance requests are available from the Town of Mocksville. All applications must be submitted for review by the Town. A decision to approve or deny individual variance requests will be determined within two weeks of submittal after careful consideration of the following criteria: impact on water demand, expected duration, alternative source options, social and economic importance, purpose (i.e. necessary use of drinking water) and the prevention of structural damage.

VIII. Effectiveness

The effectiveness of the Mocksville Water Shortage Response Plan will be determined by comparing the stated water conservation goals with observed water use reduction data. Other factors to be considered include frequency of plan activation, any problem periods without activation, total number of violation citations, desired reductions attained, and evaluation of demand reductions compared to the previous year's seasonal data.

IX. Revision

The Water Shortage Response Plan will be reviewed and revised as needed to adapt to new circumstances affecting water supply and demand, following implementation of emergency restrictions, and at a minimum of every five years in conjunction with the updating of our Local Water Supply Plan. Further, a water shortage response planning work group will review procedures following each emergency or rationing stage to recommend any necessary improvements to the Plan to the Mocksville Town Board. The Town of Mocksville is responsible for initiating all subsequent revisions.
